

Modern Vaccine Protocol for Doggie Daycare, Training Classes and Boarding Facilities.

New Guidelines were set forth several years ago by the AAHA and many vets are just now getting around to following them and practicing safe and modern care for our pets. These new guidelines for Canine U were developed after a lengthy consult with my own licensed Veterinarian accredited by the above association. Canine U will be following these practices and monitoring care very closely to ensure the safest environment for your pets while they are here at Canine U Dog Training Center.

- All puppies under 4 months should be vaccinated routinely under the care of a licensed vet every 3 weeks until they receive 3 rounds of DHLPP(DHPP), Rabies 1 year and kennel cough . Lymes vaccines optional but should be considered because of the woods in the dog park.
- All dogs must be yearly checked for a negative stool against parasites.
- A Kennel Cough Intranasal vaccine must be given to all dogs every 6 months.
- Dogs must be current on heartworm prevention, heartworm negative tested and be on flea and tick control during the warm months of the year.

Adult Dogs:

- Booster at 1 year 4 months of age DHLPP(DHPP)
- Rabies 3 year and booster every 3 years.
- Kennel Cough every 6 months
- Negative heartworm and parasite test
- Booster of DHPP every 3 years until age 8.

ALL DOGS that are experiencing diarrhea or are vomiting should be kept at home.
